

THE POLYMER II[®] & PRO-GARD[™] PROTECTION SYSTEM

POLYMER II[™]

ULTIMATE EXTERIOR PROTECTION

POLYMER II[™] Paint Sealant is a unique product that preserves the showroom shine on your new or used automobile. It does this with an exclusive formula of two durable, penetrating polymer resins that physically bond themselves to the painted surface. Our formula completely seals the car's finish with a protective, weather resistant barrier that yields a new dimension in depth, clarity and gloss for all auto finishes. POLYMER II[™] eliminates friction buildup, so contaminants will not adhere to finish. No wax or polish can match this level of protection.

POLYMER II[™] Paint Sealant helps protect against oxidation and fading caused by powerful ultra-violet rays that can destroy the value of your automobile. It also resists acid rain, salt air, snow, sleet, insects, road film and detergents that cause finishes to fade. Give your car beautiful, long lasting protection with POLYMER II[™] Paint Sealant.

The Benefits Include:

- Cost Savings
- Enhances & Preserves Vehicle Appearance for Years
- Higher Resale or Trade-In Value

EASY MAINTENANCE

Regular washing with a mild soap, like C-60 Super Car Wash or C-19 Red Cherry Suds[®], will remove road grime, oxidation, industrial fallout and other luster attacking contaminants. Annual use of POLYMER II[™] will keep your automobile looking factory fresh. It's easy to renew your POLYMER II[™] coating. It can be applied by hand by yourself or your local dealer.

The Appearance of Your Vehicle's Exterior & Interior Play A Major Role in Determining Its Resale Value.

Polymer II[®] protects against oxidation and fading caused by powerful ultra-violet rays, acid rain, salt air, snow, sleet, insects, road film and harsh detergents.

PRO-GARD[™]

ULTIMATE INTERIOR PROTECTION

PRO-GARD[™] Interior Fabric Protector is a unique formulation of protective polymers suspended in a non-chlorinated solution. It protects all types of fabric and carpeting, creating a transparent shield that resists both water and oil-based stains.

PRO-GARD[™] coats each individual fiber, yet allows fabric to breathe and stay soft. This provides the utmost protection against stains and spills like coffee, soda, milk, ice cream, ketchup, lotion and others. In addition, PRO-GARD[™] enhances fabric life by reducing wear from abrasion and eliminating dirt attracting static buildup.

EASY CLEAN UP

PRO-GARD[™] will keep your automobile looking factory fresh with its easy maintenance program. Interior fabrics treated with PRO-GARD[™] prevent the stain from entering the fibers so solid matter or liquids can be quickly blotted up and removed without eliminating the protective coating. Even when spills penetrate loose weave velour and cloth fabrics, they're easily blotted up or cleaned, since each fiber has been completely sealed.

PRO-Gard[™] protects all types of fabric by coating each fiber to repel spills, reduce wear and resist ugly staining.
