- **Fast Drying**
- **Restores Faded Bumper & Trim**
- **VOC Compliant**

ABB-600 **BLACK BUMPER PAINT**

FEATURES AND BENEFITS

In an effort to conserve gasoline, both domestic and foreign automobile manufacturers are racing to replace heavy chrome bumpers, moldings and trim on all vehicle models. Now, bright metal is disappearing equally as fast from these appointments and is being replaced by solid, tough rubber bumpers, moldings and trim. These appointments receive rough treatment and need to be renewed periodically. BAF Industries has formulated, in a convenient aerosol can, a natural black spray paint to restore and protect these appointments to their original finish. ABB-600 is a tough, yet flexible satin finish with excellent adhesion to all pre-cleaned surfaces. Commercial and consumer customers alike will want this easy to apply, durable black paint for all automobile accessories.

RECOMMENDED FOR

BAF Industries has had many requests to develop a special cleaner that can be used to remove the whitish residue that collects on rubber bumpers. The simple way to restore these appointments is Burford's® Black Bumper Paint. ABB-600 is also ideal for other car appointments such as, plastic black rear window louvers, plastic mud guards and floor mats.

APPLICATION

Make sure all surfaces to be treated are clean and dry prior to application. For best results, spray at room temperature, not below 70 degrees. Shake can until mixing ball moves freely. Continue to shake for a full minute. Hold can 6 to 12 inches from surface. Spray with stroking motion. Two or more thin coats are better than one heavy application.

SPECIAL NOTES

Hard, slick surfaces may require sanding with fine wet/dry paper to prepare surface. Mask off all areas and appointments that will not be sprayed.

PACKAGING

16 OZ. CAN/12 PER CASE
