- **Combines Carnauba Wax & Polymer Resin**

- **Apply By Hand Or DA**
- **Durability 3-6 Months**
- **Easy Application & Removal**
- **VOC Compliant**

P-35-Q SATIN CREME™ Sealer Wax

FEATURES AND BENEFITS

The word "Premium" means the best of the best. P-35 Satin Creme™ Sealer Wax is a blend of the highest quality amino functional (curing resin) silicones with the best grade of carnauba wax as well as two other clear, hard waxes. Sealants have been renowned for their ability to last a long time, longer than any pure wax product. Carnauba wax has always been praised for its deep, beautiful and lustrous shine. Together they bring the two best known features in waxes and sealants into a unique formulation. Satin Creme™'s best features include: Connoisseur quality ingredients formulated for easy application and removal as well as a brilliant shine coupled with Dow Corning's new acrylic polymer resin that will lock in the deep gloss for months of lasting beauty. Dow Corning claims "increased detergent resistance-polishes withstand greater number of car washes". Also, polishes formulated from this resin exhibit good corrosion resistance properties, according to Dow Corning. What makes this product so good is the ability to take all the ingredients and unify them all together in a stable and easy to use system. PRO® continues to explore the world of chemistry to bring the latest and best to our customers.

RECOMMENDED FOR

P-35 is an esoteric type product that will add new brilliance to all types of paint (clear coats, enamels and lacquers). Formulated as a true final finish wax for the discriminating customer, it is designed to be used on a pre-cleaned surface after compounding or polishing but it does contain 4% of a two micron particle cleaner that will remove light oxidation and hairline scratches. Pre-clean the surface with Duz-All® or Clear Cut™ before applying Satin Creme™ Sealer Wax with an orbital buffer or by hand. It can also be used with a high speed buffer but we don't recommend high speed buffing for your final finish wax as it can produce swirls if you are not an experienced buffer. We recommend that it be used on new cars, clean used cars and all painted surfaces that have no oxidation or other contamination. It is important not to use this product as a cleaner type wax or polish, as the amino functional silicones need a clean surface to set up properly. The object is to get a hard cake paste wax shine that lasts a long time.

APPLICATION

Note: Keep from freezing. Do not apply in direct sunlight or onto a hot surface.
Directions: Shake Well Before Using. For best results, pre-clean the surface with Duz-All® or

Clear Cut™ to remove contaminants and condition paint before applying P-35. Satin Creme™ may be applied by hand or with an orbital buffer. In all of the applications, make sure the surface is cool and in good condition. Allow finish to set up and properly cure for 24 hours before exposing to moisture or the elements.

Hand Use: Pour Satin Creme™ onto a clean terry cloth or wax applicator. Spread evenly over a small area on surface, rubbing in well with a circular motion. Let dry to a haze then wipe off with a clean cloth. Polish by hand to a high gloss finish, using a PT-8 Microfiber Polishing Cloth.

Orbital/DA Application: Apply product to a clean bonnet. Turn on orbital and spread product evenly over surface. Let dry to a haze then use a second clean bonnet to remove the product.
