CHERRY FINISHING WAX

FEATURES AND BENEFITS

As the name implies, Cherry Finishing Wax™ is a high quality final finish/topper wax. This easy to use creme wax combines Brazilian Carnauba Wax and natural oils to produce an ultra rich, deep gloss shine. It is the final step in achieving that deep, clear shine. It will bring out the very best in any type of finish, especially dark ones.

Why is it different from our other finish waxes?

The first thing you notice is that it is a very oily product, possibly with an oil float on top. THIS IS OK. It shakes back in just fine. With Cherry Finishing Wax™, we use a cationic formulation that causes the oil phase to migrate to the outer ring in the emulsion. But this is good! The cationic plates the Carnauba Wax and instantly makes it water repellent. This is important to those who must wax a vehicle and send it back out into the weather immediately. This unique cationic/carnauba formulation also provides anti-static properties and extended protection that lasts 3-4 months. Cleaning ability is minimal. This is a finishing wax - not a polish. It contains a small amount of micro fine abrasive that helps to remove any light contaminants. However, it **must**

be applied to a pre-cleaned surface.

The micro fine abrasive leaves just a slight haze. There is almost no powder or residue when wiping off. No white residue sticking to black textured plastic and in cracks and crevices.

RECOMMENDED FOR

Safe for all types of paint finishes - new and used. Formulated as a long lasting final finish wax for the discerning customer, it is designed for use on a pre-cleaned surface. Apply with an orbital buffer or by hand. Unless you are an experienced buffer, we don't recommend high speed buffing for your final finish, as it can produce swirls.

APPLICATION

Note: Keep from freezing. Do not apply in direct sunlight or onto a hot surface.

Directions: Shake Well Before Using. Safety glasses and rubber gloves are recommended while using this product. For best results, pre-clean the surface with Duz-All® or Clear Cut™ to remove contaminants and condition paint before applying Cherry Finishing Wax™.

Hand Use: Pour Cherry Finishing Wax™ onto a clean, slightly dampened terry cloth or wax applicator. Do quarter sections of the vehicle at a time. Spread

evenly over a small area on surface, evenly over a small area on surface, rubbing in well with a circular motion. Let dry to a haze (about 1 minute) and wipe off with a clean, soft PT-8 micro-fiber Polishing Cloth or 100 % cotton towel. Polish, by hand, to a high gloss finish, turning towel while wiping down.

Orbital/DA Application: Apply product to a clean orbital bonnet. Turn on orbital and spread product evenly over paint surface. Let dry to haze (about 1 minute), then change to a clean dry bonnet and remove excess material. Burnish to a high gloss finish.

High Speed Buffer: NIOSH approved dust mask and safety glasses are recommended while high speed buffing this product. Use a high speed buffer with an RV-85-C Foam Finish Pad. Apply a quarter size amount of product to finish. Center and lay buffing pad directly on top of product. Begin buffing product evenly over a small area of surface at 1700-2000 rpm's. As product dries, reduce pressure and increase rpm's to 2400 to burnish surface to a high gloss.
