## P-79 QUICKOR™ Liquid Carnauba Wax

### FEATURES AND BENEFITS

P-79 Quickor™ was designed and developed for one specific reason - SPEED. In this day and age of "Express Waxing", the name of the game is doing a great job as quick as possible. PRO® recognized the need for a fast wax that could be applied by hand with professional machine results. Easy on - easy off, accents the major concerns of all who are looking for great results in a final finish wax. Quickor™ achieves a brilliant, deep gloss finish by hand, quickly and easily. Durable copolymer resins, combined with the best grade of 100% Brazilian carnauba wax, produce a deep, "wet look" finish with "hard shell" protection qualities unsurpassed by other waxes and polishes applied by hand. Unique carrying agents provide excellent cleaning qualities allowing the pure carnauba & polymers to adhere to finish much better. Also removes oil, tar and road film with ease. Now with speed and time saving technology, you can get the optimum results in the most profitable manner. You can do it better and Quickor™.

### RECOMMENDED FOR

Quickor™ is designed as a final finish wax for the new clear coat & water base paint systems, yet it works great on all pre-cleaned paint finishes. Quickor™ is non-abrasive and concentrates on bringing out the depth and clarity inherent in late model paint finishes. P-79 Quickor™ is excellent for new car prep, "express detailing" and similar situations when you are pressed for time and have to speed up your system.

### APPLICATION

Quickor™ has been formulated to be used by hand, but can be used by machine with great results.

Directions: Shake well before using. For best results, pre-clean surface with P-40 Duz-All® to remove oxidation and surface contaminants before applying Quickor™. Hand Use: Apply to a clean, soft, dry cloth or wax pad. Wipe product evenly over a small area of painted surface, rubbing well in a circular motion. Let dry to a haze (about 1 minute) and wipe off with a clean, soft, dry PT-8 microfiber towel. Polish by

hand to a high gloss finish, turning cloth while wiping down.

Orbital Buffer/DA: Apply P-79 to orbital bonnet. Turn on machine. Buffing with adequate pressure, spread uniformly over a small area of paint surface. Let dry to haze, then change to a clean dry bonnet and remove excess material. Burnish to a high gloss finish.

High Speed Buffer: Use with a 1400-2300 rpm buffer. Apply sparingly to buffing pad. Spread uniformly on paint surface before buffing. Buff with VF-85-C Yellow Foam Pad or RV-85-C Charcoal Foam Pad with adequate pressure. As product dries, reduce pressure and burnish to a high gloss finish.

### SPECIAL NOTES

Note: To minimize staining or streaking, do not apply in direct sunlight or onto a hot surface.

### PACKAGING

PINT/12 PER CASE  
GALLON/4 PER CASE
